IMPORTANT UPDATES FOR RESIDENTS

EMA & Supervisors Evaluating Best Funding Method for Sewer Rate Increase

The Easttown Municipal Authority (EMA), who oversees the sewer system and any planned maintenance, is working with the Township Supervisors to evaluate the best methods for funding increases in sewer rates while keeping the costs as low as possible.

KEY UPDATES

Valley Forge Sewer Authority (VFSA) Treatment Plant

The VFSA initiated a \$28M capital upgrade for which Easttown customers are obligated to pay around \$3.8M. That upgrade raised the sewer fee by around \$400,000 in 2025 and is expected to require an additional fee of around \$900,000 in 2026. Additional annual payments will be necessary until the obligation is repaid.

AQUA Trunk Sewer

Easttown pays AQUA to transport Easttown's wastewater to the VFSA. That fee has risen considerably over the last few years, from around \$410,000 in 2020 to around \$878,000 in 2025.

Capital Improvements

Sewer systems consist of pipes, pumps, parts and buildings. This equipment requires ongoing repair and replacement. Those repairs and replacements are expensive. Easttown recently completed the installation of a new force-main pipe at the cost of around \$3.2M). The new debt service was added to the existing debt service, and payments will continue until the obligation is repaid. The total debt service is around \$1.3M per year.

Collectively, the VFSA fee, the AQUA fee and the debt service for Capital Improvements represent around 2/3 of the Township's annual cost for sewer operations.

If you have questions or want more information, contact our Staff at 610-687-3000 or visit the Public Works departmental page at www.easttown.org.

CONTINUED ELECTRIC SYSTEM UPGRADE

Vegetation work followed by construction to meet energy needs.

PECO will be completing an infrastructure upgrade project to enhance the local electric distribution system. This \$3 million investment will help withstand more frequent and damaging storms, improve reliability by reducing the frequency of outages that cannot be prevented, and support the adoption of cleaner energy resources such as solar and electric vehicles.

About the project:

- PECO will be upgrading and installing new, innovative equipment, including new poles and tree-resistant aerial wires.
- Advanced devices will be installed that can stop the flow of electricity if a problem occurs and automatically restore electricity where possible.

What you'll see during this project:

- Please see the map on where the upgrades will occur.
- PECO anticipates tree removals and tree trimming work will be required.
- All work will be performed by PECO crews and qualified PECO contractors.
- PECO has developed a plan to minimize direct customer impact as much as possible and to complete the project in a safe and timely manner.

During the **next few weeks**, qualified PECO contractor Davey Resource Group will be in your area surveying the necessary tree work. **If there is required tree work on your property, PECO will contact you directly to review the plan in-person.**

Tree work is anticipated to begin in May 2025 and is expected to be completed in June 2025. Work on electrical equipment, including poles and wires, is scheduled to start once tree work is complete. The project is expected to be completed in December 2025.

Crews may need to temporarily interrupt electric service to safely complete some of this work. PECO will work with customers to ensure they are informed in advance of activities and any planned interruptions. To ensure you receive all outage updates, confirm your phone number is accurate through PECO's MyAccount system at peco.com/myaccount or by calling PECO at 1-800-494-4000.

If you have any questions regarding the details of this project and how it may impact you, please contact Patricia Haug, Customer Liaison for PECO, at Patricia.Haug@exeloncorp.com.

NEW TRASH COLLECTION SERVICE

Whitetail Disposal to Replace Republic Services Starting October 1st

Due to Easttown's current contract with Republic Services set to expire on 9/30/2025, a new contract has been awarded to the lowest bidder (per Township guidelines), **Whitetail Disposal — A Casella Company**, effective starting on 10/1/2025.

TRASH/RECYCLING TOTERS

New trash and recycling toters will be delivered to your residence (or each household) by Whitetail Disposal at the end of September; Republic Services will collect their recycling toters at the time of their last collection.

KEY UPDATES

2026 RATE INCREASE

The trash fee, charged quarterly to customers, will continue to match the contract fee charged by the contractor; Easttown anticipates an increase of approximately +10% for 2026.

FULL AUTOMATION

Both trash and recycling containers will be collected via automated collection vehicles in the provided toters.

WhitetailDisposal

A **casella** Company

RECYCLING

Toss **ONLY** the recyclable items listed below into your recycling bin

CARDBOARD/PAPER

TRASH & RECYCLING COLLECTION CALENDAR

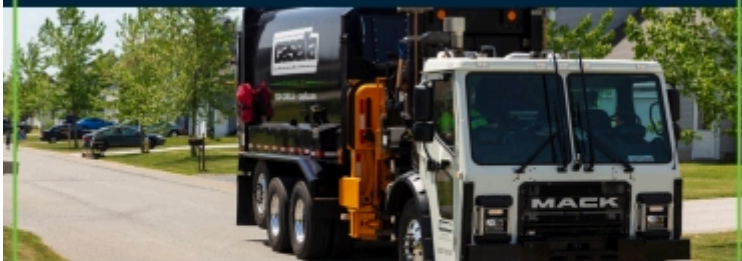

Easttown Township, PA

A Guide to Your New Trash & Recycling Service

COLLECTION INFORMATION:

- Trash and recycling collection occurs **weekly**, on **Mondays**.
- The first weekly collection will take place on Monday, October 6th, and every Monday thereafter.
- You will receive new wheeled carts that will be specific to your address and are included with your service.
- All trash and recycling must be in provided carts. An additional cart is available, please contact our team for more information.
- Bulk waste collection occurs **weekly. One item per week; however, it must be scheduled. To schedule pick up, please email Whitetail.Easttown@casella.com.**
- Leaf and yard waste are collected on the dates indicated on your calendar. Must be in bio-bags or bundled.
- Place containers at the curb the night before your scheduled collection day.
- For additional information, call **610-936-9967**.

SCAN FOR MORE INFO

2025-2026 CURBSIDE COLLECTION CALENDAR

ATTENTION EASTTOWN RESIDENTS:

If there is a holiday during your collection week, your service will be delayed by one day. See the calendar below for reference. Let's **Recycle Better™** together. Please review the included poster for a complete list of acceptable and unacceptable items. For additional resources visit casella.com/RecycleBetter.

METRO-VET.COM

What's in store for Berwyn?

Get ready to experience new businesses around every corner! Berwyn is expanding, are you ready?

First of all, a Trader Joe's is opening in the Berwyn Shopping Center! Who isn't excited to explore the isles and find all our favorite things we didn't know we needed!

Next, Haus of Paws will be expanding their space and coming to Berwyn! This means more room, more style, and more pooches! Our main line dogs cannot wait for their spa days to come.

America may run on Dunkin', but Berwyn will be running on Parlor Doughnuts! This mid-west franchise is making its way to our community thanks to Janet and Garrett Fry. We have been living in a coffee desert for so long, so cannot wait for their doughnuts, breakfast sandwiches, and COFFEE!!

Italy has finally made it to Berwyn with Settantatré Pasta and Provisions! Your dreams of delicious gluten-free pasta have now been answered. Whether it's date night at the weekly Osteria dinners, or hands-on girl's night out to perfect the ideal pasta shape, Settantatré pasta and provisions provides the ideal experience. Saluti!

Next, RAZRBAR is expanding their brand into a boutique-y style barber shop in the Boot Shop on the corner of Woodside and Lancaster Ave. RAZRBAR will be offering full barber services with historic decor and nods to Berwyn's past.

Lastly, Lift Strength and Wellness will be soon joining Berwyn on Lancaster Ave! I am looking forward to their focus on wellness, nutrition, and lifestyle changes. In addition, Lift wants to start working more with the growing market of menopausal women, helping bring them a supportive approach.

It's a Berwyn Thing!!

Maine Line Murals

Main Line Murals has began their new summer mural projects! Meet our artists, Casey Saccomanno, Dan Scott, Ali Williams, Alloyus Mcilwaine, and Laura Stockdale.

Meet the Artists:

Located in Berwyn, Casey Saccomanno is a fashion designer, print, and mural artist. Her florals designs are stunningly minimalistic.

Dan Scott's psychedelic paintings create pops of color and add vibrant impacts to any area they touch.

Ali Williams' style has everything, from realism to abstract art, she can do it all. Her addition to the murals will surely brighten the community.

Alloyus Mcilwaine creates stained glass like artworks, incorporating symbols he calls kudoglyphs. Look closely at his artwork to find secret messages about positivity

Laura Stockdale captures the beauty found in mundane things, bringing light to things we don't always notice.

EASTTOWN TOWNSHIP POLICE DEPARTMENT

Back to School Safety

As the new school year begins, the Easttown Township Police Department would like to remind residents, parents, students, and drivers of the importance of school safety.

With increased traffic and more children walking or biking to school, we urge all motorists to slow down, obey posted speed limits—especially in school zones—and remain vigilant at crosswalks and bus stops. Pennsylvania law requires drivers to stop at least 10 feet from a school bus with its red lights flashing and stop arm extended.

Parents are encouraged to review safe walking routes with children, remind them to look both ways before crossing streets, and avoid distractions such as phones while walking. Students riding bikes should wear helmets and follow the rules of the road.

Let's work together to make this school year safe and successful for all.

School Bus Safety

School's starting soon and we all have one thing in common—we care about our children's safety...we want them to enjoy their years in school and to return safely to us each afternoon.

One way to ensure their safety is to go over a few simple rules:

- Have them wait for the bus in a safe place, away from traffic and the street;
- Stay away from the bus until it comes to a complete stop and the driver signals them to enter;
- When being dropped off, exit the bus and walk ten giant steps away from the bus. Also, the bus driver can see them best when they are farther from the bus;
- Use the handrail to enter and exit the bus;
- Stay away from the bus until the driver gives his/her signal that it's okay to approach; and
- Be aware of the street traffic. Drivers are required to follow certain rules of the road concerning school buses, however, not all do!

HISTORY MATTERS

The Signal Hill Skirmish: Who, But a Fool, Ever Threatened to Burn a Stone House

The decisive British victory at Battle of Brandywine in mid-1777 led to the British occupying Philadelphia while the Continental army winter encampment was nearby in Valley Forge. The British Army occupied Philadelphia for about nine months before leaving in June of 1778 to merge forces with troops in New York City. The British Army obtained much of the necessary food and supplies to feed their force of some 15,000 soldiers located in the city by foraging supplies in the surrounding areas.

The Continental Army established outposts to provide intelligence for Washington and his staff, monitor British troop movements, capture supplies from British foraging parties, and intercept local produce headed to the market in Philadelphia. One such line of outposts extended from Mont Joy at Valley Forge, along what is now Cassat Avenue, down Waterloo Avenue and along Newtown Road. The outposts used rudimentary platforms placed in tall trees on high ground to observe nearby roads and send/receive signals to other outposts along the line. The outpost on the hill at the Southeast corner of Sugartown and Newtown Roads was the site of a short battle on January 18, 1778. This was likely the only significant action in Easttown during the Revolutionary War.

The hill is known locally as "Signal Hill" to memorialize the encounter. The stone

house that quartered the continental detachment at the outpost still exists, has been added onto several times in the last 250 years, and is currently "A Childs Place," a child care and daycare center at 524 Sugartown Road.

This line of outposts was under the command of 21 year old Captain Henry "Lighthorse Harry" Lee of Virginia. His activity at these outposts were so successful in disrupting the British supply provisions from this sector that the British commander, General Sir William Howe, planned an attack in early 1778 to capture Lee and restore supply shipments for his forces in the city.

British spies provided the location and size of Lee's detachment. The British sent out 200 mounted troops under the command of Captain Crewe. The British assault was led by a subordinate officer Banastre Tarleton, who later distinguished himself with aggressive tactics and brutal attacks in the Southern Campaign (1779-1781).

As the British approached the outpost on the morning of January 18th, several of the Continental soldiers out early scouting for supplies nearby were captured before they could sound an alarm. The remaining 10 or so American soldiers at the outpost barricaded themselves in the stone house. James Scott, the property owner working in the nearby barn, managed to escape unnoticed to seek additional troops quartered a mile or two to the North. Upon surrounding the house, Tarleton called out for the unconditional surrender of Lee and his soldiers. According to reports, Lee's response (somewhat humorous given the dire circumstances) was "Who but a fool ever threatened to burn a stone house."

The Continental soldiers were greatly outnumbered, but managed to return fire from various window and door openings to simulate a greater number of defendants. They successfully repelled the initial assault to enter the house. There was little protection for the advancing troops in the yard surrounding the house, and Tarleton himself benefitted from a carbine misfire from point blank range. The British soldiers eventually turned towards the stable to capture the horses, but a volley of shots from that side of the house turned them back. Tradition has it that Captain Lee shouted out encouragement about oncoming reinforcements and Lieutenant Lindsay, in an attempt to distract the British, beckoned from a second floor window to non-existent Continental relief troops to hurry - as if they were nearby.

The British troops took the bait and withdrew from the property to return to Philadelphia via Newtown and Darby Roads. The battle likely lasted an hour or two. The British casualties included three dead and three wounded. The Americans suffered several wounded soldiers but no deaths.

The original "stone house", central portion of today's daycare center.

The opposing leaders

Tarleton led the Signal Hill Skirmish as a junior officer. He rose through the ranks quickly after the British returned to New York from the Philadelphia Campaign in June 1778. His reputation grew as an aggressive tactician and the brutal handling of opponents in the New York theater. That reputation grew even stronger later in the war after leading numerous bloody battles in the Southern Campaigns.

Henry Lee was also a young officer in the Continental Army at the time of the Signal Hill Skirmish, having recently graduated from the College of New Jersey (now Princeton University). He distinguished himself at the prior battle of Brandywine and later in the Revolutionary War Southern Campaign, rising to the rank of Major General. He was also the father of Robert E. Lee who led the Confederate army during the American Civil War.

The Tarleton Estate

It's not certain when the property was eventually named "Tarleton" for the British officer who led the assault. Tarleton, Inc was incorporated in 1964 at this address, and relocated to the Tarleton Day School on 327 Waterloo Avenue in 1986. The current daycare center, "A Child's Place," acquired the property in 1987 and relocated their childcare center from the Strafford Elementary School property.

WATER QUALITY CONSERVATION

Forested Riparian Buffers are Invaluable. Here's Why...

Most streams in Easttown Township are part of the Darby Creek Watershed which flows south through Delaware County to the John Heinz National Wildlife Refuge and under I-95 into the Delaware River. Much of the western Darby Creek headwaters are in our township. This is significant because what happens in the headwaters impacts the water quality in the creek throughout the watershed.

Land development, tree removal, and especially impervious surfaces are the greatest causes of degraded water quality in our local waterways. An impervious surface is one that does not let water pass through it, such as pavement (parking lots, roads, sidewalks, driveways), the foundation of a house, or a hard-surface patio. Impervious surfaces disallow water from being absorbed by the land. Without deep tree and plant roots to hold it, soil is washed away as stormwater flows over it, eroding creek banks, increasing sediment, and carrying pollutants (especially road salt), all of which is detrimental to water quality and aquatic wildlife.

One of the most effective ways to improve water quality is through riparian buffers. A riparian buffer is a long strip of preferably native vegetation thirty to one hundred feet in width bordering the creek bank. The most efficient riparian buffers, known as forested riparian buffers, include trees. Lawns are not effective riparian buffers as grass roots are only as deep as the grass is tall. According to the PA Department of

Environmental Protection, "Riparian forested buffers are crucial to the protection and enhancement of the water resources in Pennsylvania."

Riparian buffers are even more critical for the Darby Creek headwaters here in Easttown Township. As noted by Fischer and Fischenich (2000), "Riparian buffers in headwater streams have much greater influences on overall water quality within a watershed than those buffers occurring in downstream reaches. Even the best buffer strips along larger rivers and streams cannot significantly improve water that has been degraded by improper buffer practices higher in the watershed."

Accordingly, a mature forested riparian buffer in Easttown Township, such as the one along the Darby Creek tributary in Hilltop Park, is invaluable. Here's why...

A forested riparian buffer captures 70-90% of sediments and provides bank stabilization, improving water quality. Enhancing a tree and shrub riparian buffer with a vegetated filter strip of tall native grasses traps fine silt and sand, increasing sediment retention to 92-96% and further augmenting water quality. Additionally, each mature deciduous tree in a forested riparian buffer absorbs up to 11,000 gallons of water per year, thereby reducing flooding.

An exemplary forested riparian buffer, such as the one at Hilltop Park, includes wetlands, marshes and connected floodplains that promote a robust ecosystem locally and downstream in the watershed. Water quality in the Hilltop Park

tributary is comparable to other higher quality Easttown Township Darby Creek water testing sites, indicating that sediment pollutants and contaminants are being processed by the mature forested riparian buffer and the functioning aquatic ecosystem.

Forested riparian buffers are more efficient than other types of riparian buffers. Compared to grassland buffers, forested riparian buffers slow the rate of water flow by 2.5 times and reduce peak flows to downstream waterbodies, resulting in reduced rates of flooding. Forested riparian buffers also have up to 5 times more biotic life which filters out contaminants, such as up to 9 times more nitrogen uptake and up to 2-5 times more phosphorus uptake. Excesses of these nutrients (eutrophication) can cause algal overgrowth and blooms, leading to hypoxia (dissolved oxygen depletion) and the death of aquatic organisms, including fish.

The trees in a forested riparian buffer are critical to a thriving aquatic ecosystem. Macroinvertebrates are important bioindicators of water quality and a healthy ecosystem. Macroinvertebrates are animals without a backbone that can be seen without using a microscope or magnifying glass, such as snails, mussels, crayfish, and the larvae of dragonflies, mayflies, and many other insects. These aquatic macroinvertebrates are incredibly important to the ecosystem. Mussels filter and clean the water. They are a food source for muskrats, river otters, raccoons, and waterfowl. The aquatic insect larvae provide sustenance for frogs, salamanders, turtles, sunfish, trout, bass, and other fish. Aquatic insects that have undergone metamorphosis and fly off are food for frogs, turtles, bluebirds, tree swallows, goldfinches and other birds. Macros, as they are often called, rely on trees in several ways.

Forested riparian buffer tree canopies offer shade which keeps water temperatures cool, increases dissolved oxygen, and minimizes algae overgrowth, allowing aquatic organisms such as fish, freshwater mussels, and other macroinvertebrates to survive and thrive in the creek. Decaying tree limbs and trunks produce dissolved organic matter which accounts for 46% of a creek's nutrient energy, feeding diatoms (microalgae), fungi, bacteria, microscopic organisms, and macroinvertebrates while also stabilizing the bank, dissipating flow energy, and creating overhang habitat for fish.

Falling leaves from trees in a forested riparian buffer create leaf litter that accounts for 34% of the stream's nutrient energy, providing sustenance for microscopic aquatic life and macroinvertebrates, which in turn supports the food chain for insects, fish, birds, and terrestrial animals. Tree detritus and leaf

continues on page 22

WATER QUALITY CONSERVATION

litter in creeks are the foundation of the food pyramid, accounting for 80% of the stream's nutrient energy that sustains aquatic organisms.

Thus, **trees are the keystone species for the creek ecosystem and water quality.** A keystone species is an organism that the entire ecosystem depends upon. The removal or reduction of a keystone species can lead to significant changes in, or even the collapse of, the entire ecosystem.

You may have noticed many small tree saplings and shrubs, usually with deer protection guards around them, planted along streams. These are newly installed riparian buffers where there was likely only grass along the creek banks. These riparian buffer restoration projects are the beginnings of what will someday be a forested riparian buffer. It will take at least 10-15 years for a newly planted riparian buffer to have any impact on water quality

and 50-100 years for the full benefits of a mature forested buffer to be realized. This is because saplings must grow before they can do the ecosystem work of mature trees in a forested riparian buffer. But we must start somewhere! If you live along Darby Creek or a tributary, planting any number of native trees or shrubs — the more, the better — along the creek banks will ultimately contribute to improved water quality and a more robust aquatic ecosystem.

The marsh at Hilltop Park offers habitat to a variety of wildlife while naturally filtering creek water by trapping sediments and pollutants.

The connected floodplain at Hilltop Park promotes a robust aquatic ecosystem locally and downstream in the Darby Creek Watershed.

STORMWATER POLLUTION PREVENT FOR RESIDENTS

Below are some helpful tips for preventing stormwater pollution:

YARD WASTE DISPOSAL.

Keep yard waste and grass clippings out of the road to avoid clogging the stormwater system. Yard waste and grass clippings increase nutrients in stormwater which encourages the growth of algae and weeds downstream.

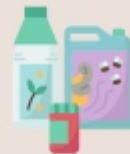

PICK UP PET WASTE.

Pet waste is a leading source of nutrient and bacteria pollution. Make sure to pick up after your pets to keep harmful pollutants from entering local waterways.

LOOK FOR LEAKS.

When performing vehicle maintenance, contain any fluids and look for any leaks that could be washed into the storm system during a rain event.

LAWN CHEMICAL APPLICATIONS.

Apply pesticides, herbicides, and fertilizers as outlined on the label and never before a rain event or near a waterway.

BIRDHOUSES COME TO EASTTOWN

If you have visited Hilltop Park recently, you may have noticed our latest additions to the Park's offerings. In March, 8 Eastern Bluebird houses were installed at the eastern end of the park as well as a Purple Martin condominium outside Hilltop House. These 9 bird houses were recommended to Easttown Township when PA Game Commission visited the park last fall. Dan Mummer of PA Game Commission said the large, open meadow with separation from the woods, but nearby perching locations was conducive to Eastern Bluebird houses. Purple Martins also prefer open clearings away from the woods, but proximity to humans. Mummer's recommendations to the Township were provided to the EAC, who decided to act upon his suggestions this spring offering an educational birding opportunity to Easttown residents as another way of getting to know our natural neighbors.

For those unfamiliar with Eastern Bluebirds, they are beautiful, small birds native to North America, east of the Rocky Mountains. Males have bright blue plumage, a warm orange belly, and white lower belly. Females are gray, with bluish wings and tails and orange-brown bellies. Juveniles of both sexes are gray in color with blue tinted wings and tail feathers. They are secondary cavity dwellers, meaning they must nest in holes in trees and cavities that have already been made by other species ex. Woodpeckers. The removal of dead trees and snags has greatly reduced their breeding habitat making them increasingly reliant on humans for nesting sites.

Purple Martins are another American songbird with beautiful, deep purple plumage, cheery songs and great aerial tricks. Trees with multiple woodpecker holes that would have been the ancient nesting sites of these colonial nesting birds, have disappeared as forests have been cut down to build houses and other buildings. Since the early 1800s, and perhaps even prior to Europeans settling here, humans in the eastern US have provided the housing that purple martins require for nesting. According to the Purple Martin Conservation Association, their population has declined over 24% in the past 50 years due to habitat loss and competition with European House sparrows and Starlings.

The unique relationship between humans and Purple Martins appears to be mutually beneficial- martins were valued by people for eating insects that eat crops (some studies show they can eat upwards of 260 billion insects a year!) and because they chased crop eating birds away from farmland. At one time, many farms across eastern and southern states had purple martin houses, but the tradition has declined as farmlands have been lost.

While they too are found in the spring and summer east of the Rocky Mountains, they

leave in early fall for a balmy winter in Brazil. When they arrive back home, they are similarly reliant on humans for nesting habitat. Purple Martins prefer to nest in colonies where they can be close together (and close to humans, as they are social birds)! After speaking with several other local Purple Martin colony managers, the EAC selected a house/gourd hybrid condominium structure on a pulley system for easier nest monitoring. Purple Martins like to nest high in the air, and in sites previously colonized, hence the pulley system for raising and lowering houses for monitoring and cleaning, and decoys on the roof to encourage martins to check out the space.

A handy Easttown Resident volunteered to build us several bluebird houses at no cost, offering us 4 beautiful homes; the other 4 houses were sourced and installed by Willistown Conservation Trust and their Bluebird monitoring program.

Following installation, resident volunteers attended complimentary training through an online Bird Town PA workshop, as well as

an in-person training with Blake Goll of Willistown Conservation Trust. Resident volunteers can now sign up to monitor bird houses on a weekly basis using provided equipment and monitoring logs. As of early May, our volunteers have seen two Eastern Bluebird nests started in the houses along with several Sparrow nests. Purple Martins are just beginning to arrive back from their winters in Brazil and have been sighted around the houses. Colonies may take several years to develop but once established can last decades as Purple Martins practice "site fidelity," returning to the same colony year after year.

We hope you enjoy seeing the increased bird activity surrounding Hilltop Park's newest bird houses and learning more about these beautiful North American birds.

If you are interested in getting involved with bird house monitoring, please check out the Sign Up Genius:

ENVIRONMENTAL ADVISORY COUNCIL

This spring the Easttown EAC wrapped up an exciting project: the creation of a greenhouse gas emissions inventory for the Township and recommendations for climate action. This project was done with the Penn State University Local Climate Action Program (LCAP). After completing a community-wide greenhouse gas emissions inventory earlier this year, two Penn State University students, guided by their faculty advisor, worked with an Easttown Twp EAC member and Township staff to draft a climate action plan to reduce emissions and pull together other case studies and resources for community education and outreach to support climate action.

The greenhouse gas emissions inventory finds that like many residential communities, Easttown Township's biggest emissions sectors include Transportation (43%), Residential Energy (40%), and

Commercial Energy (12%). These areas therefore represent the biggest opportunities for emissions reductions and were a key focus of the spring LCAP work.

The draft climate action plan produced during this spring semester provides a set of recommendations for potential climate action that will not only reduce Easttown's greenhouse gas emissions but also provide important and desirable co-benefits related to improving public health, reducing energy costs, and enhancing community resiliency. The plan includes both short- and long-term recommendations with varying degrees of emissions impact. For the largest sector, Transportation, recommended actions included improving transportation efficiency, building out electric vehicle charging locations in the community, and integrating electric vehicle charging requirements into building codes. For

residential and commercial energy, opportunities to reduce energy demand in our buildings, incentivize building electrification, and increase energy efficiency were recommended. There are opportunities available to residents to improve the weatherization of their homes, learn more about cost-effective ways to implement solar on their rooftops, and get rebates and discounts from PECO to reduce overall at home electricity demand.

The EAC's participation in the LCAP has guided some strategic thinking about climate action and potential alignment with the existing and robust Chester County Climate Action Plan while developing tailor-made recommendations for Easttown Township. The resulting draft document is intended to be a living document from which we can pull ideas to ensure a more thriving, resilient Easttown.

COMMUNITY COMPOSTING

Back to Earth Compost Crew hosts a Compost Collection Site at the Easttown Library parking lot on the 1st and 3rd Saturday of each month from 12:00 — 2:00 PM. Bring your five-gallon bucket of food scraps for just \$5. Use your own bucket or purchase one from Back to Earth for \$10

What can I put in my Compost bucket?

Yes! These items can be composted...if they can fit in your bucket(s):

- Brown paper bags (uncoated and unlaminated)
- Cardboard (ripped up)
- Coffee grounds/paper filters
- Compostable plates
- Corncobs
- Eggshells & paper egg cartons
- Breads & pastries
- Fireplace ashes (cooled)
- Fruits all parts
- Grass clippings
- Hay and straw
- Leaves
- Paper napkins/paper towels (without cleaning chemicals)
- Pasta
- Pet hair
- Pizza boxes (soiled is fine as long as it's ripped up)
- Pine needles
- Shredded Newspaper
- Nut shells
- Rice
- Sawdust
- Tea bags (remove staples)
- Toothpicks
- Veggies all parts
- Wood chips
- Yard trimmings (no vines or invasive weeds)

Community Composting

Easttown Library
Parking Lot

1st & 3rd Saturday of
the month
12 - 2 PM

PLEASE NO meat, bones, dairy, produce stickers, rubber bands, twist ties, coated cardboard, junk mail or plastics. We CANNOT accept bio bags or any type of plastic-like materials—even when marked compostable.

LITHIUM-ION BATTERY DISPOSAL HAZARD BY PATTI LYNN RECYCLING RESOURCES MANAGER

KEEP LITHIUM-ION BATTERIES OUT OF TRASH & RECYCLING

It is extremely likely that you have rechargeable lithium-ion batteries in your home — to power a cell phone, laptop, or power tool, for example. Batteries are both ubiquitous and confusing, having various sizes and chemistries in multiple products. They also don't last forever. It is important to know how to properly dispose of them, ESPECIALLY those with lithium-ion (Li-ion). From button cells to embedded ones, batteries are smaller, lighter, cheaper, but more energy-dense than ever before. Their power can make them dangerous to manage, even if you think they have lost their charge.

WHY IS THIS IMPORTANT?

The two Chester County landfills that accept your trash must routinely manage potential fire conditions. Collectors of trash and recyclables must also be prepared for dangerous materials that may be

hidden in residents' containers. You wouldn't want a "hot load" dumped in your neighborhood!

BASIC FACTS:

Batteries are either primary (one and done), or they are rechargeable.

RECHARGEABLES DO NOT go in your recycling bin OR your trash bin.

- Look for these symbols that mean lithium-ion in a battery: Li-ion, Li+, LiB, LIB, UN3480, and UB 3481 (if built into a product).

- Beware counterfeit Li-ion batteries; they are often made with lower quality materials and less safety features. Look for misspelled words, forged certifications, cheap packaging and pricing, and suspicious third-party sellers online.

HOW YOU SHOULD HANDLE "DEAD" BATTERIES:

- A spent battery can still have a charge. Li-ion batteries are flammable if they are punctured. It is unsafe to remove a Li-ion battery. Before battery drop-off, tape the terminals, or put the same type of batteries (all NiCad, e.g.) in a plastic bag. View the CCSWA's safety video.

- Retailers such as Staples, Home Depot, and Lowes often accept batteries. Check online or use Call2Recycle's zip code locator: www.call2recycle.org/locator/

- Register for a County Household Hazardous Waste event.

- Bicycle batteries: the Call2Recycle product stewardship organization that recycles batteries has partnered with People for Bikes to collect bike batteries at retail bike shops.

- Small power equipment batteries: www.opei.org/battery-basics/

- Alkaline batteries (AA, AAA, etc.) are the ONLY ones that can safely go in trash.

- For more battery types, visit www.chestercountyswa.org/373/Disposing-of-Batteries

Batteries are getting recycled for their component metals, thereby reducing extraction needed from the earth. That is a good thing. Please be safe and responsible with your batteries.

Pedals for Progress/Sewing Peace, in its continuing effort to recycle unwanted items properly, is having a used bike and sewing machine collection sponsored by **Chester Co. Solid Waste Authority.**

Anyone with an adult or child's bicycle in repairable condition is urged to donate their bike to this worthy cause. We do not accept "bikes for parts" or disassembled bikes. **We also accept working portable sewing machines and sewing notions (no fabric, please).**

Bikes and sewing machines can be dropped off **rain or shine:**

**SATURDAY, SEPTEMBER 13th 2025
9AM-12PM**

**West Goshen Municipal Complex
ENTER from Five Points Rd.
1025 Paoli Pike. West Goshen, PA 19380**

P4P/SP collects 3,000 to 5,000 items annually and transfers this material wealth to those in greater need. To date more than 170,000 bicycles and 6,300 sewing machines have been shipped to developing countries in Central America, Africa and Eastern Europe. In these countries the bikes

pedals for progress™
Putting used bikes to good use

are reconditioned by partner agencies and distributed at low cost to poor working adults. Bikes provide reliable transportation for commuting to work, transporting product to market, and provide greater mobility accessing health care and other services. Sewing machine shipments help initiate educational programs and generate income opportunities that may otherwise remain out of reach for many people. Steady employment for adults is vital to the development and success of struggling communities.

It costs \$75 on average to collect, process, and ship each bicycle. A donation toward shipping costs is necessary for our continued success. \$20 is suggested per bike and sewing machine. All cash and material donations are fully deductible. A receipt will be provided on site.

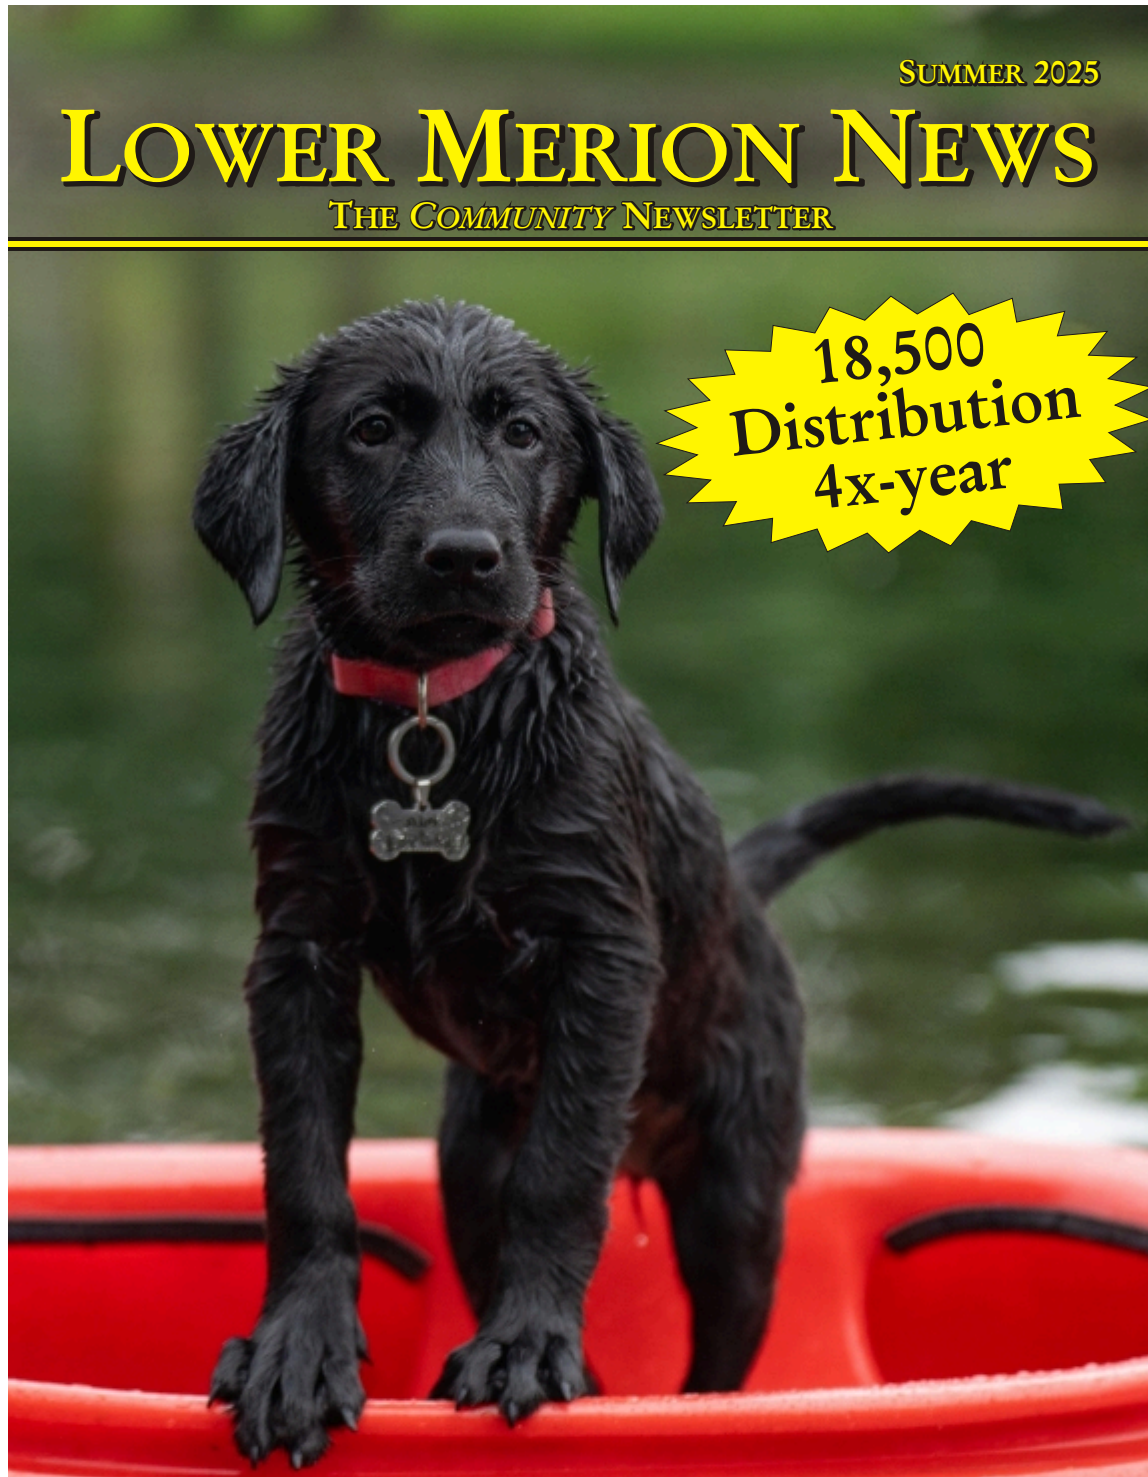

Pedals for Progress/Sewing Peace is a 501(c)(3) corporation and a registered charity in the states of NJ, NY, PA, CT, VT. Brochures explaining this innovative program will be available at the collection site. P4P seeks donations of wrenches for our overseas shops. For detailed information about our overseas projects and a current schedule of bicycle and sewing machine collections, visit our website at www.p4p.org.

HALLOWEEN SAFETY

6

HALLOWEEN SAFETY TIPS

TRICK-OR-TREATING SAFETY
Always accompany young children during trick-or-treating and plan a safe route in well-lit areas. Older kids should always trick-or-treat in groups.

CANDY INSPECTION
Instruct children not to eat candy until it has been inspected at home by a parent or guardian.

PET SAFETY TIPS
Keep pets indoors during Halloween festivities to prevent them from getting scared or agitated.

COSTUME PRECAUTIONS
Make sure your costumes fit well; keep them short to avoid trips and falls. Avoid masks that may obstruct vision; try makeup instead! Don't forget a flashlight, glowstick or reflective bag.

PARTY SAFETY TIPS
Keep well-lit paths and stairways to prevent trips and falls at Halloween parties and gatherings. Use flameless candles or battery-operated lights for decorations to avoid fire hazards.

BE SAFE!
